FrontendArena

BUILD BATTLE 2026

AI × Web Development Hackathon

Problem Statement: InsightFlow — Intelligent Customer Feedback & Decision Platform
Duration: 48 Hours
Participation: Individual
Organized by: Frontend Arena

Problem Overview

Businesses receive customer feedback from multiple sources, including reviews, surveys, and support messages. However, identifying recurring issues, understanding customer sentiment, tracking changes over time, and deciding which problems to address first can be challenging. Your challenge is to build InsightFlow, an intelligent web platform that transforms raw customer feedback into meaningful insights and helps businesses make better decisions using data and AI.

Core Requirements

1. Feedback Management

Allow users to submit feedback and import a CSV dataset.
Display, search, filter, and organize feedback entries.
Provide sample data for demonstration.

2. AI-Powered Analysis

Analyze feedback to identify sentiment, recurring topics, and common complaints.
Group similar feedback into meaningful categories.
Use Adaption meaningfully within the AI or data-processing workflow.

3. Analytics Dashboard

Display key metrics, sentiment distribution, and frequently reported issues.
Visualize trends and changes in feedback.
Allow users to filter results by category, sentiment, or other relevant attributes.

4. Intelligent Recommendations

Identify high-priority issues based on feedback patterns.
Generate actionable recommendations supported by the analyzed data.
Explain why particular issues deserve attention.

5. Reports & Issue Tracking

Allow users to save or track important issues.
Provide a way to export or share an insight report.
Present the findings in a clear, business-friendly format.

FrontendArena

Technical Expectations

Build a responsive, functional web application with a polished UI/UX. Participants may choose their preferred frontend framework, backend, database, APIs, and supporting libraries.

Adaption must contribute to a meaningful part of the AI or data workflow. Participants should be able to demonstrate and explain their integration.

AI coding assistants and Vibe Coding are permitted. Participants must understand their implementation and submit their own work.

Submission Requirements

- Live deployed application
- Source code repository
- Short project demonstration
- Brief explanation of the Adaption integration

Rules

- Individual participation only.
- All work must be completed within the official 48-hour window.
- Use of third-party libraries, APIs, and AI tools is permitted, subject to their terms.
- Participants must comply with licensing requirements and avoid plagiarism or misrepresentation.
- The submitted application must be functional and demonstrable.

ONE PROBLEM. DIFFERENT MINDS. SMARTER SOLUTIONS.
BUILD. ADAPT. SHIP. COMPETE.
